

The de facto standard in mobile phone forensics

.XRY provides a fast, efficient and secure method to extract mobile phone data

The de facto standard in mobile phone forensics, the .XRY system is the first choice among law enforcement agencies worldwide.

Utilizing an intuitive interface, the .XRY application provides a fast and efficient way to analyze a wide range of confiscated mobile phones, reducing the data extraction process to minutes rather than hours. The information gathered from the confiscated phone is secure and traceable, ensuring their legal standing and credibility in a court of law.

How it works

Just follow the wizard to connect the phone, select the model in the drop-down menu and all the technical settings will be made for you. .XRY lets you extract and manage all types of data – call lists, contacts, SMS and MMS messages, calendar, mail, photos, video and so on – and store them in a single, well-structured report in the language of your choice. You can customize the report for your needs; type in the case number or other references needed, include a logo and a tamper-proof report is created within minutes.

All authorized persons can access the report with the free .XRY Reader application, allowing them to sort through and select relevant information. The export function in .XRY Reader offers a wide range of functionality to facilitate further distribution and analysis of the data.

All .XRY customers have unlimited access to .XRY software updates. The latest cables are also included in the annual license fee. And the support team is friendly, fast and efficient, winning accolades from law enforcement agencies around the world.

KEY BENEFITS

- ▶ Tested and approved by law enforcement authorities worldwide.
- ▶ Supports the majority of the mobile phone marks and models, as well as PDAs.
- ▶ Fast and efficient extraction method.
- ▶ All data – calls, photos and videos etc. – available in one application.
- ▶ Data files are 100% forensically secure and traceable.
- ▶ .XRY Reader gives authorized persons access to relevant data.
- ▶ License fee provides continuous upgrades and cables.
- ▶ Quality training and certification programs.
- ▶ Fast and reliable technical support.

The de facto standard in mobile phone forensics

Stores all data in a single application

Today's mobile phones are highly complex and may contain several different storage sources, such as internal memory, hard drives, memory cards and SIM cards. .XRY can extract calls, SMS and MMS messages, contacts, calendar, photos and video and store all information inside the same file. This makes search and analysis functions much faster and more efficient than competing products.

Printed reports in minutes

The user can personalize information about the case, such as case number, investigator name, seizure number and so on. It is also possible to create or rename fields in the .XRY application to meet the user's exact requirements. The .XRY application automatically includes the chosen logo, address and other details in the report. The report can be printed in its entirety, or just selected data. The final report can be created in few minutes and exported to Excel, Word or other file.

High forensic security, traceable and secure log files

The .XRY software maintains the integrity of the information extracted from the mobile phone, eliminating all risk of evidence manipulation. In addition, the process of data extraction can be fully traced, ensuring the integrity of the evidence in a court of law. Furthermore, data cannot be changed in the file or the report, although comments can be added. This ability to trace the process and show how the results were acquired is a critical advantage in legal and other proceedings.

Flexible .XRY Reader for authorized personnel

All authorized persons can access the report with the free .XRY Reader application, allowing them to sort through and select relevant information. The export function in .XRY Reader offers a wide range of functionality to facilitate further analysis of the data.

Examine mobile phones without SIM card or PIN code

.XRY comes with a separate SIM id-Cloner software and SIM/USIM reader, which works with all types of smartcards. This allows you to examine mobile phones without the original SIM card as well as PIN code locked phones. Moreover, you can examine mobile phones without a connection to a mobile network in order to avoid receiving calls, SMSs and also to avoid data getting overwritten.

Upgrade scheme for support of future mobile phone models

.XRY supports the majority of the seized mobile phones and manufacturers on the market. We also have a strong support for Symbian, Blackberry and Windows Mobile. .XRY comes with continual updates for new phones.

Your annual license fee gives you:

- ▶ 12 months software maintenance and software upgrades.
- ▶ All new .XRY cables released during the license period.
- ▶ 12 months free support by phone, fax, e-mail and web forum.

Praise-worthy customer service

Micro Systemation's fast and efficient customer support services are available via the web, email, and telephone. An extensive manual is integrated in the software that describes the functions and the phones the system supports, including details of what information can be extracted from each phone.

Training and certification

.XRY training helps users take full advantage of the powerful .XRY application. Our two-day Certification Program ensures those certified have the highest level of .XRY knowledge, qualified to testify as experts.
